Performance of the underlying loan portfolio

In the first quarter of 2023, the underlying loan portfolio continued to perform better than it was expected before the issue of the Notes. The share of the loan portfolio with zero days past due (DPD) as of 31.03.2023 was 72.2% of the initial portfolio principal in comparison to the expected 61.9% and the share of loans with 1-30 DPD was 3.7% of the initial portfolio principal vs the expected 5.9%. Also, the cumulative amount of defaulted loans as of 31.03.2023 was smaller than expected – 3.4% of the initial portfolio principal vs the expected 7.9%. It should be also mentioned that, as of 31.03.2023, the amount of the loan portfolio principal amount that was repaid as scheduled (13.6% of the initial principal amount) did not substantially differ from the expected amount (15.2% of the initial principal amount), but the amount of loans completely repaid in advance (5.9% of the initial portfolio principal amount) was smaller than the expected amount (8.1% of the initial portfolio principal amount).

	TOTAL	144	0.0%	0.0%

Actual cash flows of the Notes for 01.01.2023 – 31.03.2023 collection period and 01.02.2023 – 30.04.2023 interest/coupon period were close to what was forecasted before issue of the Notes. Total cash inflows from the loan portfolio were slightly smaller than expected as the actual advance repayment rate was lower than expected as well as the amount of defaulted loans and corresponding proceeds from the sale of defaulted loans were smaller than forecasted (see section 'Performance of the underlying loan portfolio' above). That resulted in slightly smaller than expected repaid principal amount of the Notes senior tranche.
