

# INVESTOR PRESENTATION UP TO EUR 25M BOND ISSUE

REFI SUN, UAB

2025

## **DISCLAIMER**

This presentation is neither considered as prospectus as defined in Regulation No. 2017/1129, nor Information Document as defined under the Law on Securities of the Republic of Lithuania. Moreover, this presentation is not approved by any financial supervision authority of the Republic of Lithuania, or any securities regulation authority of any other jurisdiction as such.

- This material is provided to you for information purposes only. You should not rely upon it or use it to form the definitive basis for any decision, contract, commitment or action whatsoever. UAB "REFI Sun" (the Company) has taken all reasonable care to ensure that the information contained in this presentation is reliable, but no guarantees, warranties or representations are made as to the accuracy or completeness of the information contained in this document.
- This presentation includes description of the Company and information about the Guarantor (the Fund) and its subsidiaries (together the Group). It is furnished to you solely for your information and you may not reproduce it (or any part of it) or redistribute it (or any part of it) to any other person or otherwise divulge, directly or indirectly, its contents to any person. This presentation does not constitute or form part of, and should not be construed as, an offer, solicitation, financial promotion or invitation to subscribe for, underwrite or otherwise acquire, any securities of the Company or the Group.
- This presentation is intended for discussion purposes only and does not create any legally binding obligations on the part of INVL Asset Management, the Guarantor (the Fund) or the Company. This Presentation is not intended to form the basis of a decision to purchase securities or any other investment decision and does not constitute an offer, invitation or recommendation for the purchase of securities. This material is: (i) for your information, and we are not soliciting any action based upon it; (ii) not to be construed as an offer to sell or a solicitation of an offer to buy any security in any jurisdiction where such offer or solicitation would be illegal; and (iii) based upon information that we consider reliable, but we do not represent that it is accurate or complete, and it should not be relied upon as such. When making an investment decision, you should rely solely on the Prospectus and not the summary contained herein.
- When reviewing the information, please note that past performance is no guide to or guarantee of future performance. You should be aware that ideas and potential opportunities discussed herein carry risk, that the value of described assets can vary over time, and that potential investors may not get back the full amount invested.
- This presentation includes forward-looking statements. These statements may be identified by such words as "aim", "target", "expect", and similar expressions, or by their context. These statements are made on the basis of current knowledge and assumptions and address matters that involve risks and uncertainties.

  Accordingly, no assurance is given that such forward-looking statements will prove to have been correct. You should not place undue reliance on forward-looking statements. The Company undertakes no obligation to update or correct any inaccuracies which may become apparent after the date of this presentation.
- The distribution of this presentation may be restricted by law in certain jurisdictions and persons into whose possession any document or other information referred to herein come should inform themselves about and observe any such restriction. Any failure to comply with these restrictions may constitute a violation of the securities laws of any such jurisdiction.
- The transaction mentioned herein may not be appropriate for all individuals and/or investors and before entering into any transaction you should take steps to ensure that you fully understand such transaction and have made an independent assessment of the appropriateness of such transaction in the light of your own objectives and circumstances, including the possible risks and benefits of entering into such transaction. The Company urges all persons considering investment opportunities to seek professional legal, regulatory, accounting, tax or other type of advice, as may be appropriate, on all relevant issues in considering investments in securities.

# **EXECUTIVE SUMMARY**

		Summary of Issu	e terms	
Guarantor - Fund	with the Law on Collective Investment Undertakings for Informed Investors	Issuer	UAB "REFI Sun"	
Guarantoi Funa		ISIN code	LT0000134702	
Fund investment product	Renewable energy facilities generating long-term cash flows.	Use of proceeds	Re-finance existing loans of the Group companies as well as to finance the	
Duration	7 years in total (until August 2028), with possibility to extend for 2 years	*	construction of 10 MW PV project in Poland.	
of the fund	(until August 2030). Investment period - until August 2025.	Issue size	Up to 25,000,000 EUR	
	Acquisition of renewable energy projects in early and advanced greenfield	Size of the second tranche	5,000,000 EUR	
Investment strategy	stage; Project development to electricity generation;	Subscription period	17 November 2025 09:00 – 28 November 2025 15:00	
Strategy	Exit by selling operating facilities as low-risk investment products to end	Issue Date	2 December 2025	
	users, investment funds and independent power producers.	<b>Maturity Date</b>	19 February 2028	
Geography	EU and NATO countries, with a focus on Romania and Poland	Interest Rate	Fixed interest rate 8.5% per annum	
Credibility	INVL Asset management team with over 30 years of investment management experience and >€1.9 bn asset under management.	Issue Price	1,003.0274 EUR	
Leverage	Target LTV - 70% of asset value.	Issue Yield	8.5%	
	182 MWp (out 389MWp) projects have secured financing from international	Guarantee	Bonds will be unconditionally and irrevocably guaranteed by INVL Renewable Energy Fund I	
Construction financing	banks including EBRD.  175 MWp – in process of securing bank financing.	Placement	Public offering	
	32 MWp – construction financed using Fund equity and bonds.	Lead Manager and Financial adviser	AB Artea bankas	
	Poland – 33 MWp   17MWp – operating, 16 MWp operating by 2026 Q3	Sale Managers	AS LHV Pank, AS Signet Bank	
Fund portfolio	CfD hedge – 29.9 MWp.  Romania – 356 MWp   51MWp – operating, 60 MWp operating by 2025 Q4,	Trustee	UAB "Audifina"	
	71 MWp operating by 2026 Q3, 174 MWp operating by 2027 Q3.	Legal adviser	Lawfirm Sorainen and Partners	
Sale Process	Polish portfolio – received and accepted NBO, due diligence is in progress. Romanian portfolio – received and accepted NBO. Due diligence completed. SPA negotiations.	Listing	Bonds will be admitted to Nasdaq First North via a separate application once subscribed, paid and registered with Nasdaq CSD	

## KEY INVESTMENT HIGHLIGHTS

## Experienced management team with proven track record

- Fund Partners have participated in over EUR 300 million transactions in CEE region.
- Invalda INVL Group investments through REFI and other funds in Romania alone reaches over EUR 400 million.

## Mature target markets

- Established CfD schemes enable predictable cash flows and strong exit liquidity compared to Baltic region.
- Electricity prices remain 10-20% higher during 2024-2025 in Poland and Romania compared to Baltic markets.

## Sale of project portfolio in progress

- Romanian portfolio has finalized due diligence with a potential buyer and is undergoing SPA preparation, targeting exit at commercial operation date.
- Polish portfolio has received and accepted non-binding offer; portfolio is undergoing due diligence process.

## Portfolio income hedge

- 90% of the Polish portfolio's revenue is secured by government-backed, 15-year indexed CfD contracts, ensuring stable, inflation-linked returns.
- 174 MWp largest Romanian project has finalized PPA contract negotiations with an offtaker.

## Secured construction financing

• Over EUR 78 million in construction financing secured from EBRD and top-tier lenders for 3 Romanian projects; the fourth project is in due diligence process with selected financial partners, supporting full pipeline execution.

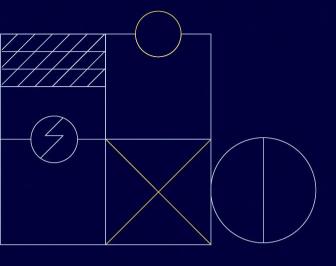

# MARKET COMPARISON

Metric	Baltics (LT+LV+EE)	Poland	Romania
Electricity demand/consumption during 2023-2024	~29 TWh	~ 168 TWh	~ 58 TWh
Production decomposition during 2023-2024	40% Renewable sources 38% Net import 22% Oil, gas	30% Renewable sources 70% Coal, gas	37% Renewable sources 63% Nuclear, gas, coal
Hedging	Limited hedging options at the moment. PPA market is shallow and dominated by 3 players; Several limited scope CfD auctions are in discussion stage.	Highly developed CfD and liquid PPA markets with a number of potential large scale corporate offtakers.  CfD – government guaranteed indexed price contract for 15 years.	PPA and CfD markets are growing. Corporate PPA market has large local and global players. CfD support scheme is in place.
Electricity prices (2024 - 2025 average)	~90 EUR/MWh	~100 EUR/MWh	~110 EUR/MWh
Exits	Limited number of potential buyers due to oligopoly in the hedge market.	Large number of potential buyers including local utility companies and global financial players.	Large number of potential buyers including local utility companies and global financial players.

# INVL RENEWABLE ENERGY FUND I BUSINESS MODEL

#### **Scope of REFI involvement in project development**

Search of Technical connection land plots solution capacity approval

The project is developed by specialized developers, who undertake to bring it to Ready-to-Build. It usually takes 2 years to develop the greenfield project from conception to Ready-to-Build.

REFI makes an investment to acquire Ready-to-Build project (via Share Purchase Agreement) only after it attains grid connection capacity.

Environmental Building authorization Building connection to agreement Build status

**The fund makes payments** to the developer for projects **based on milestones until it reaches Ready-to-Build.** All payments until construction are made using fund's equity.

EPC tender Construction Commissioning/ Energization

After the project reaches RTB, the fund takes **full control** of the development company (SPV).

**EPC tender for each project** to select the most competitive and credible construction partner.

Solar modules and inverters are sourced from **Tier 1 manufacturers** (Longi, JA Solar GoodWe, etc.).

After construction on site is finished, project is being commissioned and energized i.e. connected to the grid. After energization, project enters testing period, starts selling electricity and, after testing is over, obtains commercial operation license (COD).

Long-term PV park exploitation and cash flows

Once the project is commissioned and receives operation license, it is considered that project reached Commercial Operation Date (COD).

REFI targets sale of projects at COD.

#### Implementation structure

#### Financing sources

- INVL Renewable Energy Fund I
- Lithuanian SPVs (REFI Sun, REFI Energy, REFI Green, REFI Solar)

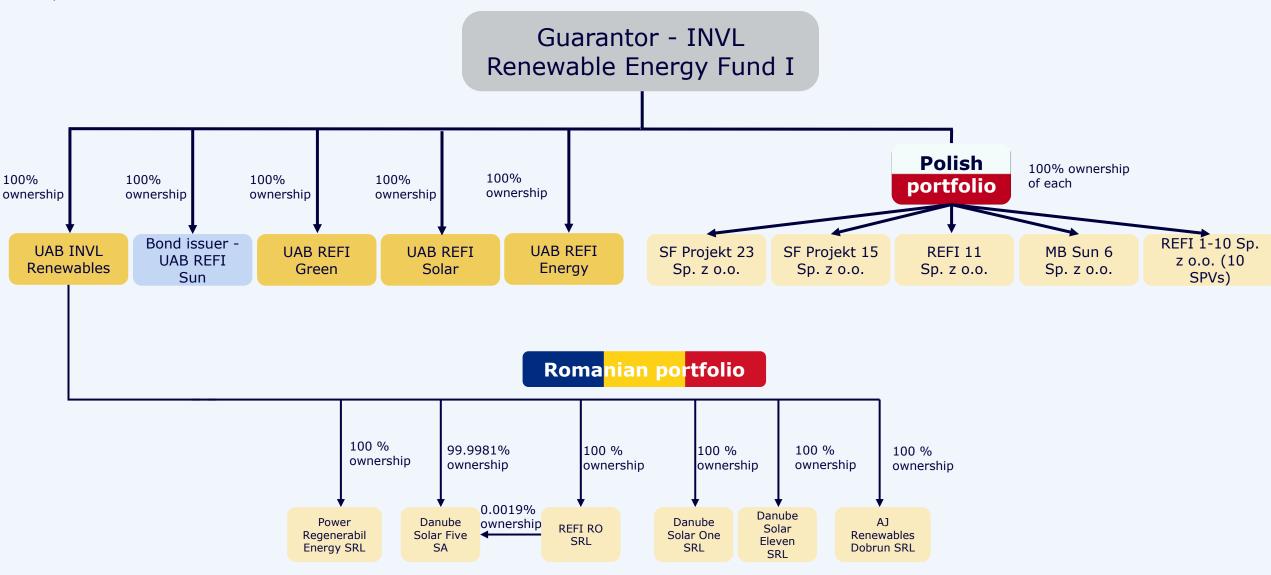

# Equity and intra-group loans Project sale proceeds

#### **Project development & construction**

- Polish Project SPVs
- Romanian Project SPVs

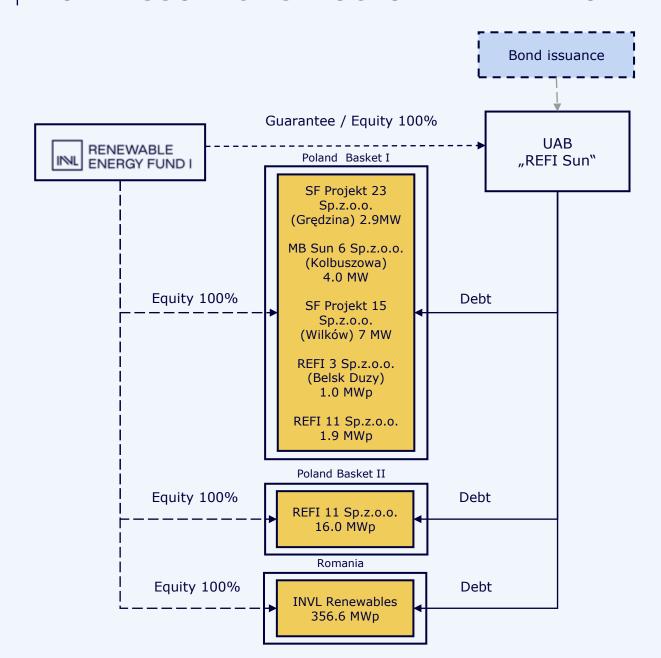

# INVL RENEWABLE ENERGY FUND I STRUCTURE

# BOND ISSUANCE STRUCTURE AND RATIONALE

## INVL Renewable Energy Fund I

Strong financial stance (as of Q2 2025)

• Equity capital raised: 57.9m EUR

• NAV: 61.0m EUR

#### Bond issuance structure and rationale:

**Issuer:** UAB "REFI Sun" **Issue size:** up to 25m EUR.

Guarantee: bonds will be unconditionally and irrevocably

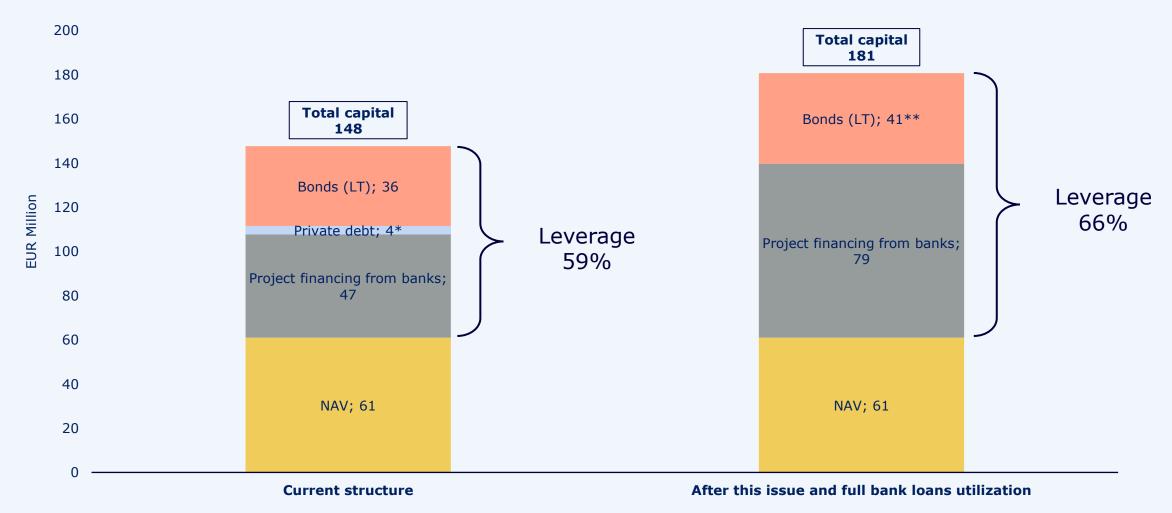

guaranteed by INVL Renewable Energy Fund I.

**Use of proceeds:** refinance existing loans of the Group companies as well as to finance the construction of 10 MW PV project in Poland.

# CAPITAL STRUCTURE

The fund's leverage currently stands at 59% and is expected to rise to around 66% following the REFI Sun bond issuance and the full drawdown of bank loans for projects under construction.

<sup>\*</sup>To be further refinanced with the REFI Sun bond issue  $\,$ 

<sup>\*\*</sup>On the assumption of a full EUR 25 million issuance

## PROJECT DEVELOPMENT OVERVIEW

## Construction

All projects, owned by INVL Renewable Energy Fund I, have been brought to RtB (ready to build) stage.

#### Poland

- 16.8 MW projects (out of 32.8 MW) have been built and are generating electricity.
- · Construction of 10 MW started in 2025 Q3.
- Remaining 6 MW should start construction during 2026 Q2.

#### Romania

- 51.1 MW construction has been completed and project started electricity generation.
- 60 MW is in construction.
- 71 MW is in construction.
- 174.5 MW project is in EPC tender and debt raising stage.

## M&A

All projects have received non-binding offers (NBO) from investors and are in different stages of exits:

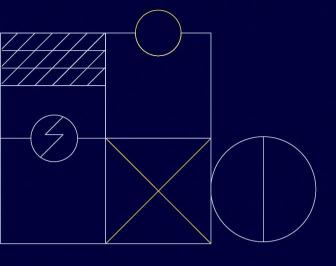

#### Poland

- 29.9 MW (out of 32.8 MW) Polish projects have secured inflation adjusted revenue for 15 years via CfD auction scheme and are offered to investors as a cash flow generating instruments.
- Portfolio has received several non-binding offers at COD and accepted the most competitive one. Due diligence process is ongoing.

#### Romania

 Non-binding offer for the acquisition of whole Romanian portfolio at COD (commercial operation date) has been received and accepted. Financial, legal and technical due diligence process has been finalized, binding share purchase agreement is in preparation.

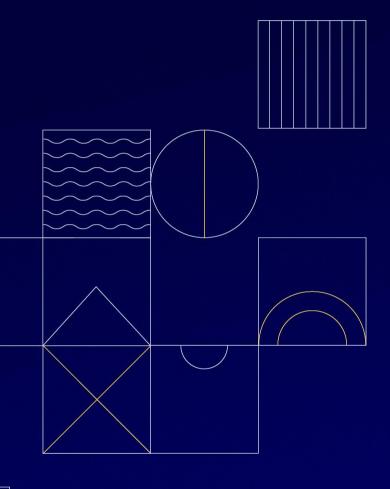

10 FUND & TRANSACTION STRUCTURE

# **16 PORTFOLIO OVERVIEW**

- 21 KEY PARTNERS & MARKET OUTLOOK
- 29 KEY CONDITIONS OF THE BOND ISSUE
- 33 ANNEX 1: DETAILED PORTFOLIO OVERVIEW
- 55 ANNEX 2: OVERVIEW OF THE RISK FACTORS

# REFI PORTFOLIO

Market	Poland	Romania	Romania	Romania	Romania
Project	Polish portfolio	Calea 1	Calea 2	Innova 1	Dobrun
Power	33 MW (8 projects)	51 MW (5 projects)	60 MW	71 MW	174 MW
Expected annual production in year 1	38 GWh	72 GWh	87 GWh	102 GWh	250 GWh
Development stage as of June 2025	17 MWp – generation; 10 MWp - construction in progress 6 MWp preparing for construction.	Electricity generation	Construction in progress	Construction in progress	RtB stage, acquiring financing for construction
Expected start of production	2024 Q2 - 2026 Q3	2025 Q1	2025 Q4	2026 Q3	2027 Q3
Revenue hedge	Long-term electricity power purchasing agreements(PPA) / CfD (contract for difference)/ Day-ahead market				
Strategy	Sale of operating power plants up to 2027				

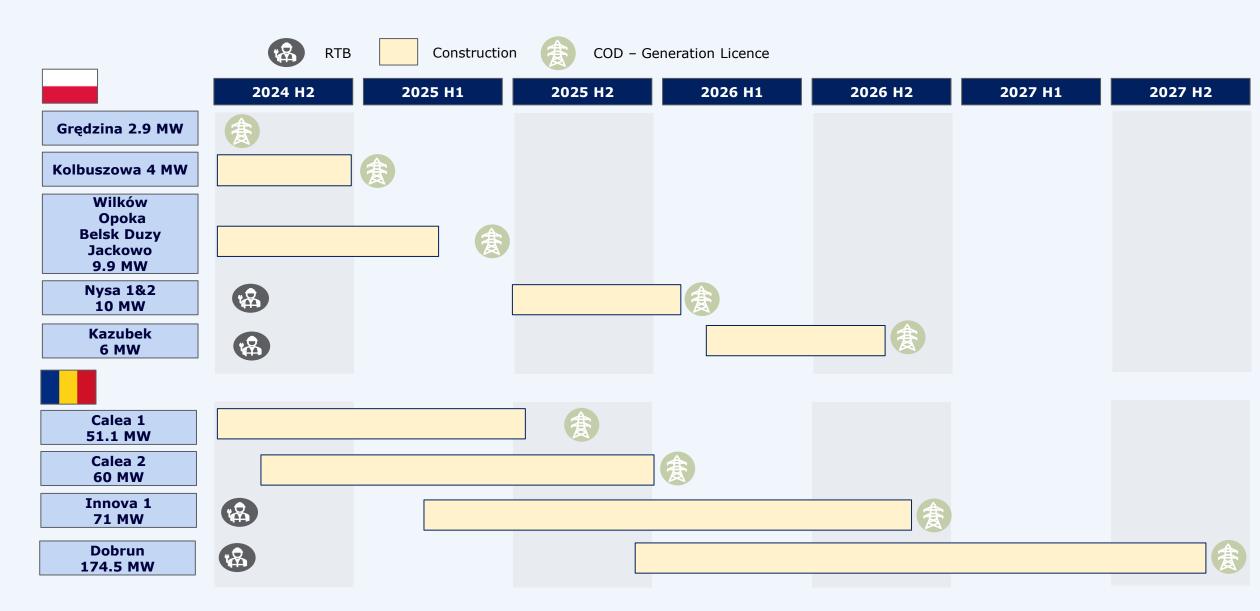

## Sale of the projects at Commercial Operation Date (COD) stage

- Standardized production technology;
- Attractive size for large institutional investors;
- Long-term, easily predictable cash flow;
- Economies of scale due to optimization of management costs;
- Potential sales bonus due to portfolio size.

# PROJECT TIMELINE

# OVERVIEW OF THE POLISH PORTFOLIO

Project portfolio consists of 8 PV projects with a total DC capacity of 32.8 MWp, currently held in 5 separate SPVs. The projects are split into 2 Baskets, grouped by the scheduled date of energization.

#### **Portfolio overview**

	Project name	Project company	Capacity	Energization date	Revenue hedge (2)
	Grędzina	SF Projekt 23 Sp.z.o.o.	2.9 MWp	Q3 2024	-
	Kolbuszowa	MB Sun 6 Sp.z.o.o.	4.0 MWp	Q1 2025	CfD
Basket 1	Wilków	SF Projekt 15 Sp.z.o.o.	7.0 MWp	Q2 2025	CfD
Bas	Opoka	REFI 11 Sp.z.o.o.	1.0 MWp	Q2 2025	CfD
	Belsk Duży	REFI 3 Sp.z.o.o.	1.0 MWp	Q2 2025	CfD
	Jackowo	REFI 11 Sp.z.o.o.	0.9 MWp	Q2 2025	CfD
cet 2	Nysa I & II	REFI 11 Sp.z.o.o.	10.0 MWp	Q1 2026	CfD
Basket	Kazubek	REFI 11 Sp.z.o.o.	6.0 MWp <sup>(1)</sup>	Q3 2026	CfD
TOTAL PORTFOLIO			32.8 MWp		

#### Location

<sup>(1)</sup> Currently 6.00 MWp, with the potential to increase DC capacity to 7.20 MWp.

<sup>(2)</sup> Projects have won Contracts for Difference (CfD) auction and have the right to sell electricity under 15-year contracts with the Polish state-run agency. Secured CfD price will be indexed annually.

# OVERVIEW OF THE ROMANIAN PORTFOLIO

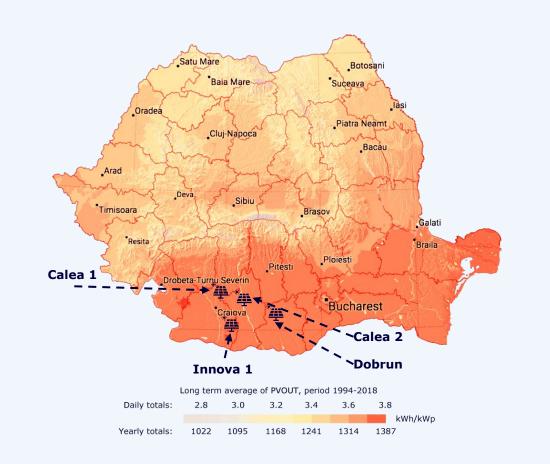

The portfolio consists of 4 project bundles (comprising 5 SPVs) under different stages of development.

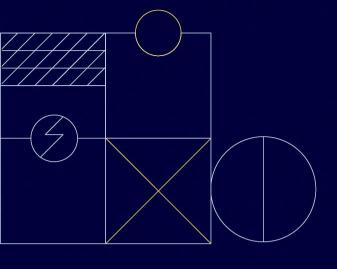

#### Portfolio overview

Project name	Project companies	Capacity	Energization date
Calea 1	Power Regenerabil Energy SRL	51.1MWp	Q1 2025

## RENEWABLE ENERGY MARKET IN POLAND

The Polish market is still evolving with both new opportunities and challenges emerging – such an environment puts a premium on speed of execution and innovative business models.

Source: Ergy Analysis, Towarowa Giełda Energii (TGE), EMBER, ENTSO-e, Instrat Foundation

## RENEWABLE ENERGY TRADING IN POLAND

Despite the recent downward trend, energy prices in Poland are expected to remain one of the highest in Europe due to an obsolete and fossil-fuel reliant energy mix.

#### **Market comments**

- Despite some diversification, coal remains dominant in Poland's energy mix. In 2023, Poland had Europe's highest emission intensity at 661 grams CO<sub>2</sub>/kWh (vs. 243 grams CO<sub>2</sub>/kWh EU average, by EMBER)
- Poland's reliance on coal and lignite links CO<sub>2</sub> allowance prices to energy costs, driving spot prices higher than the EU average.
- In 2022, Poland had a slight advantage as many EU states faced surging gas prices due to the war in Ukraine. Yet since 2024, Poland's average wholesale power price remained around 20% above the EU average.
- CO<sub>2</sub> allowance prices rose from ~23 PLN/t in 2016 to ~269 PLN/t in 2024, driven by EU Commission measures to restrict supply.
- While recent market stabilization has lowered forward prices on the Polish Power Exchange, long-term energy costs in Poland are likely to remain among Europe's highest due to coal dependence and slow progress in renewables and nuclear.

#### Wholesale electricity prices in the European Union [EUR/MWh]

#### Average CO<sub>2</sub> emission allowance [PLN/tCO<sub>2</sub>] and spot prices [PLN/MWh]

# RECENT M&A TRANSACTIONS OF SOLAR PV OPERATING PARKS IN POLAND

Seller	Buyer		Date	Size
Onde Part of Neo Energy Group, develops and builds renewable energy projects such as large-scale solar and wind farms	Part of Energa Group, invests in and develops renewable energy assets like solar and wind farms	Development	May 2025	112 MWp Solar
Lewandpol Polish renewable energy developer focusing on solar farm projects  Lewand	Energa Group  A major Polish energy utility engaged in electricity generation, distribution, and renewable energy development	S Energa GRUPA ORIEN	December 2024	244.5 MWp (225.3 MWp Solar + 19.2 MWp Wind)
EDP Renewables Global developer and operator of wind and solar power plants	ORLEN Group  A multi-energy company in Central Europe active in fuels, chemicals, and increasingly in renewable power projects	ORLEN	August 2024	306 MWp (280 MWp Solar + 26 MWp Wind)
PST Polish company that develops, builds, and operates utility-scale photovoltaic farms	An international investment manager focused on acquiring and operating solar and other clean energy assets	NEXTENERGY CAPITAL	July 2024	50 MWp Solar
PST Polish company that develops, builds, and operates utility-scale photovoltaic farms	a Polish mining and metals company that is also investing in solar farms to power its operations	KGHM POLSKA MIEDŽ	March 2024	50 MWp Solar

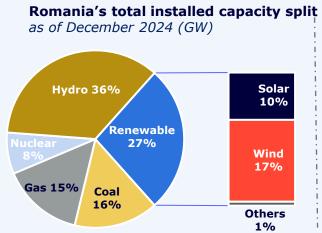

## INSTALLED CAPACITY & ENERGY PRODUCTION MIX IN ROMANIA

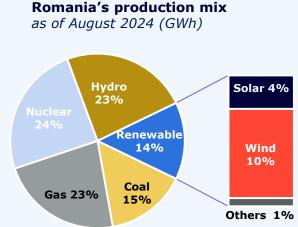

Approx. 53% of the Romanian installed capacity will be solar and wind in 2030, vs. approx. 27% as of December 2024.

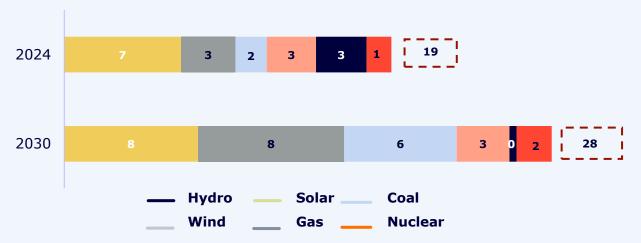

#### Romania's Path to a Diversified and Sustainable Power Portfolio

- Current installed capacity stands at 18.5 GW, and it is set to increase to approx. 27 GW by 2030.
- The nation is gradually transitioning from coal towards renewable sources, with solar estimated to grow  $\sim 3X$  by 2030, and wind to increase  $\sim 2.5X$  in the same period, with each technologies adding c. 5 GW of installed capacity.
- C. 500 MW nuclear capacity is currently under development (based on the small modular reactor technology NuScale, US-patented).

#### **Projection of installed capacity per production technology** (GW)

- Between 2021 and August 2024, Romania's electricity production shifted with a 4% drop in coal-generated electricity and a 5% increase in hydroelectric power, maintaining stable solar production. Renewables now represent 14% of the mix (excluding hydro), up 5%, aligning with EU targets.
- In terms of generation mix, in the period January August 2024 compared to the same period in 2022, there was a decrease of 20.6% in the hydro component and an increase of 32.5% in the nuclear component, respectively an increase of 36% in the coal component.

# PV INSTALLED CAPACITY IN ROMANIA

Romania is set to add c. 5 GW of PV capacity to reach its 2030 goal.

#### **PV Landscape**

- The installed PV capacity grew from 29 MW in 2012 to c. 1800 MW (1.8 GW) as of Dec. 2024. This does not include prosumer facilities amounting c. 2 GW as of Sept. 2024.
- Recent legal and regulatory shifts in Romania are beneficial for the growth of solar PV capacity, backed by Government and EU funds.
- Approved in Q3 2021, Romania's Recovery and Resilience Plan (PNRR) amounts €29 bn, out of which 41% (~€12 bn) to support clean energy. The €12 bn include €1 m to be used for the national coal phasing out.
- The EU Commission initiated in May 2022 the REPowerEU Plan to address energy market challenges following the conflict in Ukraine, with the Recovery & Resilience Facility central to its funding and execution.
- The Modernization Fund, created in 2018 to boost the EU Green Deal, supports only 10 lower-income countries in their energy cohesion efforts. Financed by the European Investment Bank, the fund allocated an additional €1.1 bn to Romania in June 2023.

#### **Installed PV Capacity (GW)**

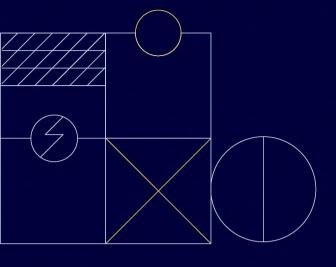

#### **Pipeline of PV Projects**

- According to Romania's Ministry of Energy, ~1,620 MW of PV capacity will be installed in 2024, with ~1,590 MW coming from non-prosumers—exceeding the output of two Cernavodă nuclear reactors. Total installed solar capacity could reach ~6.4 GW by 2030, with an additional 5.1 GW of new deployment targeted. While ~11 GW of projects are authorized for grid connection, many may not reach COD due to equity financing challenges.
- On October 31, 2023, Southeast Europe's largest PV park was commissioned in Rătești, Argeș. Developed by Econergy and Nofar Energy, the 155 MW plant is expected to generate ~220 GWh annually.
- CCE (Clean Capital Energy) began building a 42 MW plant in Horia in 2023 and has secured permits and grid access for four more largescale projects.
- Nadab 1 and 2, developed by Solas Electricity SRL (a PPC Renewables subsidiary), are planned 665 MW solar projects in Arad County. They received grid connection approvals in August 2022 and June 2024.

ISSUE SIZE	Up to EUR 25,000,000 (inclusive)
SIZE OF THE SECOND TRANCHE	5,000,000 EUR
TYPE OF PLACEMENT	Public offering in Lithuania, Latvia and Estonia
SECURITY	Bonds will be unconditionally and irrevocably guaranteed by INVL Renewable Energy Fund I
NOMINAL VALUE	1,000 EUR
ISSUE PRICE	1,003.0274 EUR
ISSUE YIELD	8.5%
TOTAL NUMBER OF BONDS TO BE ISSUED BY THE ISSUER	Up to 25,000 (inclusive)
USE OF PROCEEDS	Re-finance existing loans of the Group companies as well as to finance the construction of 10 MW PV project in Poland
TRANCHE 2 SUBSCRIPTION PERIOD	17 November 2025 – 28 November 2025
ISSUE DATE	2 December 2025
MATURITY DATE	19 February 2028
ANNUAL INTEREST RATE AND CALCULATION	8.5% percent per year, interest is calculated daily in euros from the nominal value of the Bonds, taking into account the (act/365) calculation method. For the purpose of calculating and paying interest for the relevant period of the previous period, the date on which the interest is to be paid shall not be included in the calculation
PAYMENT OF INTEREST	Interest payment days are November 19, Feburary 19, May 19, August 19 of each year. If interest payment day happens to be non-business day, interest is paid next working day. The right to receive the interest shall be held by the Bondholders (according to Nasdaq CSD) three business days before the relevant payment date.

# KEY TERMS & SUBSCRIPTION OF THE BONDS ISSUANCE(II/III)

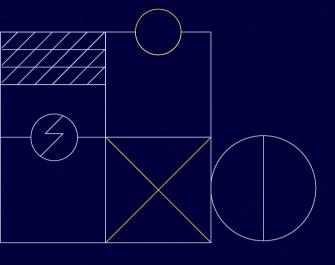

EARLY REDEMPTION	Full or partial call on the initiative of the Issuer.
	The Redemption Price shall be equal to the Nominal value of the Redeemable Bonds and interest accrued on the
	Redeemable Bonds together with the premium if such is applied.
	The amount of the early redemption premium will depend on the Early Redemption Date:
	Between 6-12 months from First Issue Date: 1.00%;
	After 12 months from First Issue Date: 0.00%;
	For sake of clarity, Early Redemption may occur on any day after 6 months of First Issue Date with 14-day notice period.
	2% premium on redemption by the Issuer after at least 75% of Bonds are redeemed upon Bondholders exercising the early redemption right (put option).
TRUSTEE	UAB "Audifina"
LEAD MANAGER AND BOOKRUNNERS	AB Artea bankas, AS LHV Pank, AS Signet Bank
SETTLEMENT AGENT	AB Artea bankas
LEGAL ADVISOR	Lawfirm Sorainen and Partners
LISTING	Bonds will be admitted to Nasdaq First North via a separate application once subscribed, paid and registered with Nasdaq CSD
LEAD MANAGER CONTACTS (FOR BONDS	Information about the distribution of the Bond issue will be provided via:
SUBSCRIPTION)	AB Artea bankas: e-mail broker@artea.lt, or by phone: +370 52 103 354;
	AS LHV Pank: e-mail ib@lhv.ee, or by phone: +372 56 206 450
	AS Signet Bank: e-mail investmentbanking@signetbank.com, or by phone: +371 62 102 911
KEY UNDERTAKINGS	As long as any Bond remains outstanding, the Issuer undertakes to comply with the following:
(COVENANTS) OF THE COMPANY	1. Negative borrowing (the Issuer cannot borrow additionally from unrelated parties);
	2. Negative pledge (the Issuer cannot pledge its directly owned assets);
	3. Change of Control (if INVL Renewable Energy Fund I ceases to own, directly or indirectly, at least 50% + 1 share in the Issuer's share capital, the Bondholders may exercise Put Option);
	4. Disposal of Assets (the Issuer cannot dispose the Assets if such transaction would have a material adverse effect);
	5. Reporting obligations (the Issuer must report its and the Guarantor's annual and semi-annual financial reports).
	6. Nature of Business - no substantial changes to the business of the Issuer and the Guarantor.

## **CALEA 1 (51 MWP)**

Project is energized and sells electricity in trial period. Final COD expected in 2025 Q4.

### **Project Overview**

- Calea 1 comprises 5 project SPVs with a total installed capacity of 51 MWp. Each SPV has its own medium voltage trafo station, being connected to Energie Distributie Oltenia (distribution operator – (DSO)). As of September 1st all SPVs have been merged to Power Regenerabil Energy SRL.
- The land used for these projects totals 81.9 hectares (agricultural), owned by the 5 SPVs.
- Construction are carried by Waldevar Energy SRL as EPC contractor.
- Equipment used: Longi panels, GoodWe inverters.

06	OVERVIEW	OF THE FUND'S	MANAGEMENT
----	----------	---------------	------------

- 10 FUND & TRANSACTION STRUCTURE
- 16 PORTFOLIO OVERVIEW
- 21 KEY PARTNERS & MARKET OUTLOOK
- 29 KEY CONDITIONS OF THE BOND ISSUE
- 33 ANNEX 1: DETAILED PORTFOLIO OVERVIEW

55 ANNEX 2: OVERVIEW OF THE RISK FACTORS

Any investment in the Bonds is subject to a number of risks. Prior to investing in the Bonds, prospective Investors should carefully consider risk factors associated with any investment in the Bonds, the business of the Issuer and Guarantor and the industries in which the Issuer and the Guarantor operate together with all other information contained in this Prospectus, including, in particular, the risk factors described below. Words and expressions defined below or elsewhere in this Prospectus have the same meanings in this section.

Prospective investors should note that the risks relating to the Issuer and the Guarantor, the industries in which the Issuer and the Guarantor operate and the Bonds are the risks that the Issuer believes to be the most essential to an assessment by a prospective investor of whether to consider an investment in the Bonds. However, as the risks which the Issuer and the Guarantor face relate to events and depend on circumstances that may or may not occur in the future, prospective investors should consider, among other things, the risks and uncertainties described below.

The following is not an exhaustive list or explanation of all risks which investors may face when making an investment in the Bonds and should be used as guidance only. Additional risks and uncertainties relating to the Issuer and the Guarantor that are not currently known to the Issuer, or that either currently deemed immaterial, may individually or cumulatively also have a material adverse effect on the business, prospects, results of operations and/or financial position of the Issuer and, if any such risk should occur, the price of the Bonds may decline and investors could lose all or part of their investment. Investors should consider carefully whether an investment in the Bonds is suitable for them in light of the information in this Prospectus and their personal circumstances.

Risk Factors Associated with the Issuer and the Guarantor Risks Related to the Financial Situation of the Issuer and the Guarantor (I/III)

### Changes in Issuer's financial standing

The Issuer is a limited liability company established for the purposes of raising funds to finance activities of the Guarantor and its SPVs, with the minimum share capital of EUR 1,000. Based on the Issuer's interim financial statements for the period of 4 months ended 30 April 2025, the own capital of the Issuer is EUR 1,000, which is composed of the share capital of EUR 1,000. Any adverse change in the Issuer's financial condition or prospects may have a material adverse effect on the liquidity of the Bonds, which may lead to a significant decrease in the market price of the Bonds, or may render the Issuer unable to fully redeem the Bonds, which may lead to investors loosing part or all of their invested funds. The Issuer deems this risk factor to be of high relevance.

### **Economic environment and financial situation**

The Issuer's and the Guarantor's business are influenced by macroeconomic factors affecting the economies of the markets in which they operate (namely, Romania and Poland). Generally, there is a positive correlation between energy prices in a given region, the structure of supply and the level of demand. One driver of energy demand is economic output: greater economic output can lead to increased demand for energy, since prices often reflect the state of the economy as a whole. On the other hand, the war between Russia and Ukraine is disrupting the regular supply of gas, which has resulted in extremely high volatility in energy prices through 2021-2023.

Also, COVID-19 and similar level global pandemics pose various supply-chain risks for the operations of the Issuer and the Guarantor, primarily the development and construction schedules of renewable energy projects. In the solar energy sector, the main challenge is posed by the delivery of solar panels and inverters. As of today, the average delivery time of solar panels is six months, while during COVID-19 outbreak delivery times have increased to 12 months and module prices have peaked to historically high. This means that a smooth and accurate construction process should be planned in advance to avoid any significant project delays. Supply-chain bottlenecks caused by global pandemics can not only delay the development of renewable energy projects, but also increase overall costs for it.

Such macroeconomic trends in the countries in which the Issuer and the Guarantor operate, and in Europe more broadly, have a significant impact on the Issuer's and the Guarantor's business and financial position and any negative macroeconomic trends could have a material adverse effect on the Issuer's and the Guarantor's business, financial condition, results of operations or prospects. These factors individually, or in combination might cause financial difficulties to the Issuer and/or the Guarantor which may affect the Investors' ability to recover their investments. The Issuer deems this risk factor to be of medium relevance.

Risk Factors Associated with the Issuer and the Guarantor Risks Related to the Financial Situation of the Issuer and the Guarantor (II/III)

### **Dependency on external financing sources**

The Guarantor and its SPVs currently intend to finance a portion of their capital expenditures for the development and construction of their projects through bank borrowings. The Guarantor and its SPVs expect to raise EUR 105 million of debt in 2025 – 2026. The maximum additional allowed financial leverage, based on the existing financial leverage level as of 31 December 2024, is EUR 184.8m.

In 2024, the Rules of the Guarantor were amended to reflect an increase in the maximum level of leverage. The maximum leverage was raised from 300% to 500% under the gross method and from 300% to 500% under the commitment method, as defined in Commission Delegated Regulation (EU) No 231/2013 of 19 December 2012. These amendments were approved by the investors of the Guarantor.

The financial leverage of the Guarantor was 187.96% based on gross method and 228.64% based on commitment method as of 31 December 2024. The financial leverage limits were not exceeded in 2024.

The financial leverage of the Guarantor, including Bonds under this Prospectus, would be 230.17% based on gross method and 313.17% based on commitment method.

The access of the Guarantor and its SPVs to debt financing is subject to many factors, many of which are outside of control of the Guarantor and its SPVs. For example, political instability, economic downturns, social unrest or changes in the regulatory environment in which the Guarantor and its SPVs have or plan to have operations could increase the cost of borrowing for the Guarantor and its SPVs with respect to new financing arrangements or restrict the ability of the Guarantor and its SPVs to obtain debt financing. Access to debt financing may be further restricted by financial covenant obligations under the existing financings of the Guarantor and its SPVs. There can be no assurance that it will be able to arrange financing on acceptable terms, if at all. The inability of the Guarantor and its SPVs to obtain debt financing from banks and other financial institutions, or otherwise through the capital markets, could adversely affect their ability to execute their investment plans and growth strategies, which could have a material adverse effect on the business, financial condition, results of operations or prospects of the Guarantor and its SPVs. In addition, an increase in indebtedness may expose the Guarantor and its SPVs to additional risks as debt can make companies inherently more sensitive to declines in revenue, increases in expenses and interest rates, and adverse economic, market and industry developments. A leveraged company's income and net assets also tend to increase or decrease at a greater rate than would otherwise be the case if debt had not been incurred to the same extent. Leverage may also restrict the Issuer from making strategic acquisitions or cause it to make nonstrategic divestitures and limit its ability to obtain additional financing. In addition, companies with relatively high fixed costs may have greater difficulty servicing higher debt levels. Debt covenants may limit the ability of the Guarantor and its SPVs to finance additional expansion through borrowings, which could limit the scope for expansion of the Guarantor and its SPVs. This could have a material adverse effect on the business, financial condition, results of operations or prospects of the Guarantor and its SPVs. In addition, there is a risk that the companies of the Guarantor and its SPVs will fail to fulfil their obligations in time - this would have a negative effect on the operating profit of the Guarantor and its SPVs. In case of late performance of a large part of obligations, the ordinary business of the Guarantor and/or the Issuer may be disrupted, it may be necessary to search for additional sources of financing, which may be not always available. The Issuer considers this risk factor to be of medium relevance.

Risk Factors Associated with the Issuer and the Guarantor Risks Related to the Financial Situation of the Issuer and the Guarantor (III/III)

### **Currency exchange risks**

Guarantor and its SPVs are operating in Romania and Poland, which are not Eurozone countries and their currencies fluctuate relative to euro. That creates several risk factors for Guarantor and its SPVs:

- all the revenues from electricity sales are denominated in local currency and its depreciation relative to euro may result in the drop of Guarantor's SPVs' value in assets and revenues denominated in euro;
- the Guarantor is providing project financing through shareholder loans and some part of them are denominated in local currencies, therefore fluctuations of local currencies may negatively affect the value of the provided loans on a balance sheet of the Guarantor;
- the sales of the projects may be denominated in local currency; therefore, the fluctuations of the local currencies may negatively affect proceeds from the sale of the assets:
- Guarantor's SPVs will be buying equipment from the local and international markets and contracts may be denominated in other currencies, which creates potential negative effects if local currencies fluctuate in between contract signing and delivery.

The Issuer deems this risk factor to be of medium relevance.

### Risk of increase of expenditures due to inflation

2022-2023 entailed considerable inflation, and such spikes can repeat in the future. Relevant expenses of the Issuer and Guarantor, e.g., investment to equipment and workforce, are closely related to the general price level. Growing inflation may prevent the Issuer and the Guarantor from changing the prices of their products and/or services respectively to preserve the existing profit margin or may lead to higher losses. Thus, the Issuer's and the Guarantor's expenditures would increase considerably due to inflation and the Issuer and the Guarantor would have to cover their increased costs from internal resources, unless the Issuer and/or the Guarantor manage to increase their prices. Thus, strong inflation may have a considerable adverse influence on the Issuer's and the Guarantor's financial situation and business results. The Issuer deems this risk factor to be of low relevance.

Risk Factors Associated with the Issuer and the Guarantor Risks Related to the Business Activities of the Issuer and the Guarantor(I/IV)

### **Electricity market fluctuation risk**

Since the Guarantor via SPVs invests in renewable energy projects, there is a risk that the fluctuations of the electricity market could result in a decrease of the revenue received by the Guarantor, and the liquidity and value of its assets. The market for renewable energy real estate also fluctuates due to increased interest rates and limited financing opportunities. This may result in a decrease of buyers' activity in the market and an increase of sellers' activity in the market. Increased sellers' activity may cause a fall in renewable energy assets' price and a drop in liquidity, which essentially would make it more difficult to sell the managed assets, which may affect the financial condition of the Guarantor and/or its debtors, as well as the Guarantor's ability to perform its obligations under the Guarantee. The Issuer deems this risk factor to be of high relevance.

#### Risks related to development of renewable energy business

The Guarantor's and its SPVs' project portfolio development plan is capital-intensive and subject to uncertainty. The Guarantor and its SPVs operate in a capital-intensive industry and any new development projects will require substantial investments. The Guarantor and its SPVs expect to make significant capital expenditures in the short- and medium-term to further develop its current projects' portfolio indicated in the Guarantor's and its SPVs' corporate structure below. If the Guarantor and its SPVs decide to proceed with any of these or other new investments, new funding would need to be secured. There is no certainty that the Guarantor and its SPVs will be able to procure funding on acceptable terms, if at all. The Guarantor's and its SPVs' success in implementing its strategy will depend on, among other things, its ability to identify and assess potential investments, successfully finance and integrate such investments, control costs and maintain sufficient operational and financial controls. The Guarantor's and its SPVs' expenditure is and will continue to be made on the basis of forecasts of production and projected prices of electricity. The Guarantor and its SPVs also make certain assumptions regarding long-term interest rates and electricity prices in its decisions on making capital expenditures. These forecasts, judgments and assessments may be inaccurate, which could undermine the economic viability of such investments and could have a material adverse effect on the Guarantor's and its SPVs' business, financial condition, results of operations or prospects. In addition, some of the Guarantor's and its SPVs' development projects and prospects may require greater investment than currently planned. In the course of development, the Guarantor and its SPVs may uncover problems or encounter difficulties with projects, including but not limited to the following:

- the Guarantor and its SPVs may encounter difficulties in obtaining and maintaining governmental permits, licences and approvals required by existing laws and regulations or additional unanticipated regulations;
- the Guarantor and its SPVs may face delays associated with challenges to permits or regulatory approvals;
- the Guarantor and its SPVs may not be able to procure grid connections, or may not be able to procure these at economically viable prices;
- the Guarantor's and its SPVs' initial evaluations of site suitability may be based on assumptions that turn out to be incorrect, or unforeseen issues may arise with respect to the land or terrain for a project;
- · the Guarantor and its SPVs may encounter engineering and project design problems; and
- third parties that the Guarantor and its SPVs partner with for initial project development may fail to perform their duties or may fail to perform them in a timely manner or to the required standards, leading to delays or a failure to discover problems with identified sites.

Risk Factors Associated with the Issuer and the Guarantor Risks Related to the Business Activities of the Issuer and the Guarantor(II/IV)

Moreover, certain newly constructed facilities and projects may not perform as expected. The Guarantor and its SPVs form their expectations around the performance of new facilities and projects based on assumptions, estimates, data provided by third parties and experience with similar assets. The ability of these assets to meet the Guarantor's and its SPVs' performance expectations is subject to the risks inherent in newly constructed solar plants, including, but not limited to, degradation of equipment in excess of the Guarantor's and its SPVs' expectations, system failures and outages. Such matters arising during development stages may result in delays or additional costs that could render the projects less competitive than the Guarantor and its SPVs initially anticipated and the Guarantor's and its SPVs' actual capital expenditure may differ from anticipate figures. Opportunities and projects may be delayed or postponed in implementation, reduced in scope or ownership share, sold or rejected and the Guarantor and its SPVs may not pursue all of the opportunities and projects that it is currently considering. This may adversely affect the Guarantor's and its SPVs' ability to execute its investment plan and growth strategies. In addition, failure to meet completion deadlines may result in the loss of applicable subsidies, grid connections or project rights. The foregoing could have a material adverse effect on the Guarantor's and its SPVs' business, financial condition, due payments on debt, results of operations or prospects. The Issuer deems this risk factor to be of medium relevance.

### Risks related to inability to complete projects under construction

The Guarantor and its SPVs may not be able to complete projects under construction. All of the development and construction phase projects are subject to risks in the development and construction phase relating in particular to engineering and design, equipment supply and construction performance. The inability to complete construction, or to complete it on a timely basis, may result in contractual defaults, contractual liability payments, impairment of assets, loss of income or a reduction in the period of eligibility for specified tariffs as a result of a failure to meet certain milestones, due payments on debt among other adverse consequences. Eligibility for certain subsidies may be compromised or lost if assets are not commissioned on schedule, and time-consuming and costly litigation may result among the Issuer or other members of the Guarantor and its SPVs and the parties participating in or financing the project's development. Projects may encounter a range of difficulties in the construction phase that result in delays or higher than expected costs that may not be fully covered or adequately addressed by performance guarantees from contractors, damages clauses or insurance, including but not limited to the following:

- contractor or sub-contractor defaults and performance shortfalls;
- delays due to unforeseen events, such as global pandemics, recessions, or acts of war;
- · damage to equipment in the course of delivery as a result of accidents or otherwise;
- · damage to components or equipment in the course of installation;
- · technical equipment software malfunction;
- adverse weather, environmental and geological conditions, force majeure and similar events;
- · theft and vandalism; and
- · regulatory authorisations or difficulties in obtaining permits.

Also, the Guarantor and its SPVs invest in the maintenance and technical inspection of power plants, nonetheless, there might be problems related to the technical characteristics of the assets under management, for example, due to construction defects, other hidden defects and contamination. Removing these problems may require significant investment, which would have a negative impact on the Issuer's financial state and cash flows. The Issuer considers this risk factor to be of medium relevance.

Risk Factors Associated with the Issuer and the Guarantor Risks Related to the Business Activities of the Issuer and the Guarantor(III/IV)

### **Asset liquidity risk**

Renewable energy assets can be relatively illiquid due to their properties. This may have an impact on the Guarantor's ability to sell its portfolio or to transfer the asset timely, and/or at the desired price. If there is a sudden need to transfer the asset being managed, there is no guarantee that the market conditions at that time will be favourable. If the Guarantor fails to obtain the desired price for the SPV's shares being sold or its other assets, this may have a significant negative effect on the Guarantor's ability to perform its obligations under the Guarantee. Since repayment of the loans issued from the proceeds of the Bonds is expected to come from asset deals including the sale of SPV's shares, failure to secure such deals at favourable conditions will impact the ability of the Issuer to redeem the Bonds on time. The Issuer deems this risk factor to be of medium relevance.

### **Competition risk**

The Issuer and the Guarantor, through its SPVs face competition from a number of different market players in many spheres of their activities in Romanian and Polish renewable energy business segment including competition for clients, contractors, equipment supplies, professional services and employees. In each of the markets and business segments, the SPVs compete primarily based on the service range, pricing, established client relationships, technical knowledge and the efficient handling of service contracts. If the Guarantor with its other SPVs are unable to respond to client trends, to increase their operating efficiency and to reduce their operating and overhead costs, they may not be able to successfully compete in the relevant markets. Should the SPVs fail to maintain their market position or procure supplies and services in the relevant markets and business segments, this could have a material adverse effect on the net assets, financial position and financial performance of the Issuer and/or the Guarantor. The Issuer deems this risk factor to be of medium relevance.

### **Inadequate insurance**

The SPVs, controlled by the Guarantor, are developing, building and operating renewable energy assets in Poland and Romania and are required to insure risks related to construction and operations. Insurance coverage may be inadequate to compensate the Guarantor and its SPVs for certain losses. Power generation involves hazardous activities, including but not limited to delivering electricity to transmission and distribution systems. Hazards such as lightning, high winds, fire, explosion, collapse, and machinery failure, are inherent risks in the operations and may occur as a result of inadequate internal processes, technological flaws, human error or external events. These hazards can cause significant injury or death, severe damage to and destruction of property, plant and equipment and suspension of operations. The occurrence of any of these events may subject the Guarantor and its SPVs to the investigation, remediation requirements, substantial damages, personal injury and natural resource damages, fines and/or penalties and loss of revenue from suspended operations. In addition, while the Guarantor and its SPVs obtain warranties from vendors and obligates contractors to meet certain performance levels, the proceeds of warranties or performance guarantees may not sufficiently compensate the Guarantor and its SPVs for lost revenue, increased expenses and financing costs or liquidated damages payments should the Guarantor experience equipment breakdown or non-performance by contractors or vendors. Damages or losses not covered by contractor warranties may be covered by insurance, but this may not always be the case, as such damages or losses may be (or be considered by insurers to be) outside the scope of applicable insurance policies. Thus, any losses exceeding the amounts of the insurance contracts may have a negative impact on the Guarantor's activities, financial state and cash flows. The Issuer deems this risk factor to be of medium relevance.

Risk Factors Associated with the Issuer and the Guarantor Risks Related to the Business Activities of the Issuer and the Guarantor(IV/IV)

### **Compliance with legal acts**

The Guarantor and its SPVs, which are operating in renewable energy sectors in Romania and Poland, are required to comply with large number of laws and regulations in these countries relating, but not limited to operational procedures and quality standards. The energy sector regulation in Poland and Romania is highly complex and frequently undergoes extensive changes. Any failure to comply with the changes in applicable laws and regulations may expose the SPVs and, subsequently, Issuer and/or the Guarantor to administrative penalties and civil remedies including fines or injunctions, as well as in certain cases even minor infringement proceedings can be started. Although the SPVs and the Guarantor have policies in place throughout its entire organization to protect against such non-compliance, the risk of failure to comply with all legal requirements may not be totally excluded. Should any material non-compliance be established by competent authorities and not rectified in due time, it may have serious financial consequences for the SPVs and/or the Guarantor and negative impact on Issuer's and/or the Guarantor's reputation. The Issuer deems this risk factor to be of low relevance.

#### Tax risk

If the economic conditions and the country's governing policy change, there is a risk that land, real estate, value-added, profit and other taxes will increase. In addition, the Guarantor, as a collective investment undertaking (CIU), currently benefits from an exemption from corporate income tax in Lithuania. Due to the tax reform being under consideration by the Lithuanian Parliament there is a risk that the applicable legal framework may change and the Guarantor may become subject to corporate income tax in the future. This could negatively affect the Guarantor's financial position.

The Guarantor will follow the possible course of the change in tax and seek to enter into agreements in tax conditions that are favourable for the Guarantor and without violating any laws.

In addition, the Guarantor could be adversely affected by challenges to its transfer pricing arrangements. The Issuer enters into intra-Guarantor and its SPVs' contractual arrangements with the Guarantor and its SPVs, including with respect to the downstream of funds borrowed at the Issuer level. Under the applicable transfer pricing regulations, companies must conduct any intra-Guarantor and its SPVs' transactions on an arm's length basis and provide sufficient documentation thereof in accordance with the applicable regulations. Any noncompliance with transfer pricing regulations (including due to insufficient documentation) could result in material adverse effects to the Guarantor's business, results of operations, financial condition and reputation. The Issuer deems this risk factor to be of low relevance.

Risk Factors Associated with the Issuer and the Guarantor Regulatory and Governance Risks (I/I)

### **Dependence on the Management Company**

The Guarantor and its assets are managed by the Management Company. Therefore, the Guarantor's activities depend on the experience, skills and decisions of the Management Company. In addition, the Guarantor's activities also depend on whether the Management Company successfully implements the Guarantor's investment policy and investment strategies. The Management Company is also responsible for the daily management and administration of the Guarantor's business. In addition, if for any reason the Management Company had to be replaced or if the Management Company lost its operating license, the management of the Guarantor may be transferred to another entity (or the Guarantor itself may lose its existing operating license). This could lead to disruption of the Guarantor's management and operations, which could have a significant negative impact on the Guarantor's operations and financial results, which in turn could lead to difficulties in settling with the Bondholders.

The Issuer, being a special purpose vehicle, established by the Guarantor has only two employees – the Managing Director of the Issuer and the account, both of them are also employees of the Management Company. Therefore all activities of the Issuer are structured in accordance with the instructions of the Management Company, acting on behalf of the Guarantor. Therefore, the activities and management of the Issuer also depend heavily on the Management Company. The Issuer deems this risk factor to be of medium relevance.

#### **Risk of Revocation of the Activity Licence**

The Guarantor and the Management Company are regulated entities. Therefore subject to the grounds stated in the legal acts the Bank of Lithuania has a right to revoke the validity of the activity licenses issued to the Guarantor and its Management Company. This may happen if the Guarantor and/or the Management Company no longer meet the requirements for obtaining a license for activity, are not able to fulfill their obligations or there is data showing that they/any of them will not be able to do so in the future, and in other cases provided by the laws of the Republic of Lithuania. Revocation of a license of the Guarantor would lead to discontinuation of its activities as a collective investment undertaking, which may affect the Guarantor's ability to perform its obligations under the Guarantee. The Issuer considers this risk factor to be of low relevance.

Risk Factors Related to the Bonds Risks Related to the Nature of the Bonds (I/II)

### **Early redemption risk**

According to the terms of the issuance, the Bonds may be redeemed prematurely on the initiative of the Issuer. If the early redemption right is exercised by the Issuer, the rate of return from an investment into the Bonds may be lower than initially anticipated. Also, the Bondholders might not have the option to invest in financial instruments offering similar risk/return characteristics at the time of the early redemption, or could face additional costs in selecting a new investment. The Issuer considers this risk factor to be of medium relevance.

### Credit and default risk

The ability of the Issuer and Guarantor to service and repay the Bonds depends on operating cash flows of SPVs and sale of their assets to the third parties. Based on Guarantor's strategy, the repayment of the Bonds will depend on the successful sale of SPVs, as owners of the operational assets, and the sale proceeds would be used for the redemption of the Bonds. Failure of the Guarantor to sell its SPVs at the prices, which are sufficient to repay the Bonds, may result in default. Credit risk should be evaluated as a possibility that the Issuer or Guarantor might become insolvent, go bankrupt, its business being suspended or terminated, and as a result, it would be impossible to redeem the Bonds and/or pay the accrued interest to the Bondholders. Moreover, should the Issuer and/or the Guarantor become insolvent, or legal protection proceedings or out-of-court legal protection proceedings of the Issuer be initiated during the term of the Bonds, an investor may forfeit interest payable on, and the principal amount of, the Bonds in whole or in part. An Investor is always solely responsible for the economic consequences of its investment decisions. The Bonds constitute direct, secured, guaranteed obligations of the Issuer, ranking pari passu without any preference among each other. In addition to that the state guarantee (insurance) is not applicable in case of investments into the Bonds. Issuer considers this risk factor to be of medium relevance.

### **Price risk**

The issue price of the Bonds with a fixed interest rate may be lower or higher than their nominal value. In addition, even if the likelihood that the Issuer and the Guarantor will be in a position to fully perform all obligations under the Bonds when they fall due actually has not decreased, market participants could nevertheless be of that opinion. Market participants may in particular be of such opinion if market participants' assessment of the creditworthiness of corporate debtors in general or debtors operating in the industries sector adversely change. If any of these risks occur, the third parties would only be willing to purchase Bonds for a lower price than before the materialisation of said risk. The market value of the Bonds may therefore decrease. The value of the Bonds may also be affected by developments in the financial markets; e.g. when the interest rates are rising, the value of the existing Bonds may fall. The Issuer considers this risk factor to be of medium relevance.

Risk Factors Related to the Bonds (II/II)

### Validity of limitation on incurring additional debt

While there are significant limitations in place, the Issuer may still incur further debt as long as the special undertakings are followed. If the Issuer incurs significant additional debt ranking equally with the Bonds, this will increase the number of claims that would be entitled to share rateably with the Bondholders in any proceeds distributed in connection with an insolvency of the Issuer. Further, any provision which confers, purports to confer, or waives a right to create security interest in favour of third parties, such as a negative pledge, is ineffective against third parties since: (i) it is a question of a contractual arrangement only being binding upon the parties to such contractual arrangement; (ii) there is no specific legislation in Lithuania providing beneficiaries of negative pledge undertakings or covenants with a preferred position vis-a-vis the claims of third parties; and (iii) no registry or public record exists in Lithuania through which negative pledge undertakings or covenants could be filed to obtain a preferred position. Should the Issuer breach its obligations under such undertakings and covenants and create a security interest in favour of a third party, such third party would obtain a valid and enforceable security interest over the pledged asset. The Issuer deems this risk factor to be of low relevance.

### **Transaction costs/charges**

When the Bonds are purchased/subscribed or sold, several types of incidental costs (including transaction fees and commissions) are incurred in addition to the purchase/issue or sale price of the Bonds. To the extent that additional – domestic or foreign – parties are involved in the execution of an order, including but not limited to domestic dealers or brokers in foreign markets, Bondholders may also be charged for the brokerage fees, commissions and other fees and expenses of such parties (third party costs). These incidental costs may significantly reduce or eliminate any profit from holding the Bonds. The Issuer deems this risk factor to be of low relevance.

Risk Factors Related to the Bonds
Offering and Admission Related Risks (I/I)

### Liquidity, listing and inactive secondary market risk

The Bonds constitute a new issue of securities by the Issuer. Although application will be made for the Bonds to be admitted to trading on Nasdaq Vilnius First North, there is no assurance that such application will be accepted, and the Bonds will be admitted to trading. In addition, Admission to trading of the Bonds on an alternative market will not guarantee that a liquid public market for the Bonds will develop or, if such market develops, that it will be maintained, and neither the Issuer, nor the Arranger, nor any of the Managers is under any obligation to maintain such market. If an active market for the Bonds does not develop or is not maintained, it may result in a material decline in the market price of the Bonds, and the liquidity of the Bonds may be adversely affected. In addition, the liquidity and the market price of the Bonds can be expected to vary with changes in market and economic conditions, the financial condition and the prospects of the Issuer, as well as many other factors that generally influence the market price for securities. Accordingly, due to such factors the Bonds may trade at a discount to the price at which the Bondholders purchased/subscribed the Bonds. Therefore, investors may be not able to sell their Bonds at all or at a price that will provide them with a yield comparable to similar financial instruments that are traded on a developed and functioning secondary market. Further, if additional and competing financial instruments are introduced on the markets, this may also result in a material decline in the market price and value of the Bonds. The Issuer deems this risk factor to be of high relevance.

Risk Factors Related to the Bonds Risks Related to Performance on the Guarantee (I/I)

#### Risk of subordination to secured claims

The Bonds will be secured by the Guarantee issued by the Guarantor. Apart from the Guarantee referred to above, there are no other collateral or guarantees of the Issue issued by third parties. The Guarantee securing the Issue does not guarantee that, in the event of a default by the Issuer, the Guarantor will be capable to satisfy in full all the claims of the Bondholders. Therefore, in the event of the insolvency of the Issuer or Guarantor, their assets will be used primarily to satisfy the claims of those creditors whose claims are secured by the property and (or) mortgages of the Issuer and Guarantor, should such happen to occur. Therefore, there is a risk that in such an event, the assets of the Company may not be sufficient to pay the Bondholders. The Issuer deems this risk factor to be of low relevance.
